Evaluasi silhouette score

```
[ ] ss_agglo = silhouette_score(X, labels_agglo, metric='euclidean')
ss_kmeans = silhouette_score(X, label_kmeans, metric='euclidean')

print('nilai silhouette score untuk Agglomerative Clustering = ', ss_agglo)
print('nilai silhouette score untuk Kmeans Clustering = ', ss_kmeans)

nilai silhouette score untuk Agglomerative Clustering = 0.5314268013240602
nilai silhouette score untuk Kmeans Clustering = 0.5546571631111091
```

Hasil Silhouette K-Means lebih baik dibandingkan Agglomerative clustering, karena hasil K-Means lebih mendekati 1

Rata-rata per Cluster

Hasil:

Cluster 0 adalah kelompok keuangan menengah ke-atas, baik secara pemasukan maupun pengeluaran

Cluster 1 adalah kelompok yang kaya dan hemat, pengeluarannya sangat kecil

Cluster 2 adalah kelompok keuangan rendah bawah, baik secara pemasukan maupun pengeluaran

Cluster 3 adalah kelompok yang boros, pemasukannya rendah namun pengeluarannya cukup besar

Cluster 4 adalah kelompok yang kaya, namun pengeluarannya juga lumayan
